How to install Power BI Desktop and get the data

1. Requirements

- A Windows 10 or 11 computer (Power BI Desktop does not run on macOS; on a Mac, use a Windows virtual machine).
- Power BI Desktop is **free**. No license or account is needed to build and open reports.

2. Install Power BI Desktop

Option A – Microsoft Store (recommended, updates automatically)

1. Open the **Microsoft Store** app.
2. Search for **Power BI Desktop**.
3. Click **Get** / **Install**.
4. Open Power BI Desktop from the Start menu. If it asks you to sign in, you can close that window.

Option B – Direct download

1. Go to the official page: https://www.microsoft.com/en-us/download/details.aspx?id=58494
2. Click **Download** and choose the 64-bit installer (`PBIDesktopSetup_x64.exe`).
3. Run the installer and follow the steps (Next → accept the terms → Install).

3. Download the data from Kaggle

1. Create a free account on https://www.kaggle.com (or sign in).
2. Open the dataset page: https://www.kaggle.com/datasets/olistbr/brazilian-ecommerce
3. Click **Download** (top right). You get a file called `archive.zip`.
4. Unzip it into a folder. You get 9 CSV files (orders, order items, customers, sellers, products, reviews, payments, geolocation, category translation).

4. Load the data into Power BI

1. In Power BI Desktop: **Home → Get data → Text/CSV**.
2. Select a CSV file, set **File origin** to UTF-8 and **Data type detection** to "Based on entire dataset", then click **Transform Data**.
3. Repeat for each table used in the project: orders, order items, customers, sellers, products, reviews and category translation.
4. In Power Query, set the locale of date columns to **English (United States)** so the dates are read correctly.

Or simply open the ready-made report `Projeto_BI_Olist_Atrasos.pbix`, available in this Google Drive folder.
